IN THE CLAIMS

Lachman et al.
F. 1.
Kocher
PMMA

Claim 1. (Currently Amended) A slurry used for attaching zeolite to a carrier, comprising:
a zeolite and an organic emulsion binder selected from the group consisting of vinyl acetate resins, (meth)acrylic-styrene copolymer resins, styrene-butadiene copolymer resins, ethylene-vinyl acetate copolymer resins and styrene-acrylonitrile-alkyl (meth)acrylate copolymer resins dispersed in water, the slurry, upon contact with a carrier, effecting support of the zeolite on the carrier.

ALMOST
wr. 3

took out (meth) acrylate resins

✕ Claim 2. (Currently Amended) The slurry used for attaching zeolite according to Claim 1, wherein the zeolite is a hydrophobic zeolite.

Claim 3. (Canceled)

✕ Claim 4. (Currently Amended) The slurry used for attaching zeolite according to Claim 1, having a zeolite content of 30-40 wt %.

Claim 5. (Currently Amended) The slurry used for attaching zeolite according to Claim 1, having an organic emulsion binder content of 3-7 wt % on a dry basis.

✕ Claim 6. (Currently Amended) The slurry used for attaching zeolite according to Claim 1, having a viscosity of 15-20 mPa·s at 20° C.

Claim 7. (Currently Amended) The slurry used for attaching zeolite according to Claim 1, having a pH of 4-6.

✕ Claim 8. (Currently Amended) A method of manufacturing a zeolite-carrying adsorption element, comprising:

causing impregnating a carrier to be impregnated with the slurry according to Claim 1 for carrying zeolite;

drying the carrier;

causing impregnating the carrier to be impregnated with an inorganic binder; and
